Title	<i>Support to project proposal drafting on resiliency of productive landscapes and ecosystems in the Dominican Caribbean Corridor</i>
NDE	<i>Pedro García, Climate Change Director, MARN pedro.garcia@ambiente.gob.do</i>
Proponent	<i>N/A</i>

Summary of the CTCN technical assistance

In the Dominican Republic, climate change and more frequent extreme events (i.e. droughts and storms) increase the degradation of ecosystems and threaten the livelihoods of communities relying on them. The capacity of individuals to cope and adapt to a changing climate and to mitigate its causes is limited. To address this challenge, the Dominican Government will submit a GCF project proposal to increase climate resilience among rural households in the Cordillera Central - Los Haitises Corridor. The proposal will address a change of cross-sectoral and multi-stakeholder paradigms to improve the management of ecosystems, production systems and water resources, and strengthen governance, value chains and government support.

Despite adaptation efforts in the country, and existing frameworks that consider climate actions as key to sustainable development, the country faces barriers for achieving paradigm shifts that it cannot overcome without additional support. Thus, the objective of the technical assistance is to support the NDE in defining the necessary activities to project preparation (i.e. the current response plan) as well as an outline for resilient landscapes and ecosystems in the Dominican Caribbean Corridor, to inform a GCF proposal formulation.
