

Country	Solomon Islands
Request ID#	2021000004
Title	Feasibility Study for Low Carbon Transport in Solomon Islands
NDE	Mr. Hudson Kauhiona Director, Department of Climate Change; Ministry of Environment, Climate Change, Disaster Management and Meteorology; Phone: +677 24074; e- hkhiona@gmail.com / hmarutana@gmail.com
Proponent	Mr. John Korinihona Director, Department of Energy, Ministry of Mines, Energy and Rural Electrification (MMERE), Honiara, Solomon Islands e- jkorinihona@mmere.gov.sb

Summary of the CTCN technical assistance

The summary should provide a brief description of the problem (barrier to climate technology deployment) and how the technical assistance will address it (brief summary of outputs and activities). Please also briefly indicate national actors involved and the anticipated timeline. Please note this summary will be used for public communication purposes so it is important that it is well written. (maximum 1250 characters including spaces)

Solomon Islands is among the most vulnerable countries to the impacts of climate change yet continue to be increasingly dependent on imported fossil fuels that dominates its Greenhouse Gas emissions. To reduce its energy reliance on the imported fuel, Solomon Islands have National Energy Policy that has targets to increase the share of clean and green sources in the energy mix. The Nationally Determined Contribution of Solomon Islands also reflect the targets to reduce GHG emission by reducing reliance on imported fossil fuel. Major share of GHG emissions from transport (land and sea), accounting for 61% of the total emissions from the energy sector, makes it a priority area to introduce and implement low carbon interventions.

The world is moving towards efficient and low carbon transport including introduction of hybrid and electric vehicles. However, in Solomon Islands', the policies, legislations and regulations relating to low carbon or energy efficient land transport has not been made effective and focussed to encourage or incentivise the introduction of electric vehicle technologies into the country.

Hence, CTCN is requested to provide support under its Technical Assistance facility on conducting feasibility study on low carbon transport in Solomon Islands. The technical assistance will help in conducting a market analysis for the promotion and implementation of low carbon transport through electric vehicles. The outcome of the market analysis will be used to develop draft policy and a roadmap of action plans for the implementation, from which selected action plans will be undertaken for feasibility study of EVs in Solomon Islands. The TA will adopt a value chain approach with special attentions, made on augmenting the grid with adequate amount of renewable energy and battery management, at end of batteries' life. The deliverables of the TA will be a report on market analysis, policy recommendations, a roadmap with proposed action plans, feasibility study for the selected action plans, input to leverage fund in future to support the concrete actions and capacity building. The maximum budget allocated for the TA is USD 169,810.

1. Background and context

Please provide a brief description of the background and context for the CTCN Response Plan. Please include national and sectoral information using recognized and publicly available sources. (maximum 2500 characters including spaces).

Solomon Islands has its own challenges and opportunities in terms of its energy situation. Solomon Islands is remaining dependent on imported petroleum products to meet its energy requirements including the demand of fuel for the transport sector. Low national electricity coverage, high energy costs and high dependence on imported fossil fuel are exacerbated by the geographical spread of the archipelago, and this adversely affects economic and social development.

In 2012, the total cost of petroleum fuels was SBD 843 million, approximately 14% of Solomon Island's national Gross Domestic Product (GDP). Over 50% of petroleum fuel being imported into the Solomon Islands is being consumed by the Transport sector (land and sea). About 95% of total installed capacity of energy generation in Solomon Islands is based on fossil fuels, and the balance 5% is through renewable energy sources¹. The energy tariff of Solomon Islands is one of the highest² in the Pacific since a major share of energy in the Islands is met through fossil fuels.

As the trend on the global price of petroleum product is very uncertain, it poses a serious threat to the energy security for the small and fragile economy like Solomon Islands. The reliance on fossil fuel for transportation also goes against the country's climate change mitigation ambition as reflected in the Solomon Islands Nationally Determined Contribution.

Low carbon transport is both a mitigation and an adaptation challenge for the people of Solomon Islands. The transport sector needs to reduce its carbon footprint and be resilient to the effects of fluctuating and expensive fossil fuels. Accordingly, as per the Solomon Islands' Nationally Determined Contributions (NDC 2016), transport (land and sea) accounts for 61% of the total emissions from the energy sector. This is by far the biggest contributor of GHG emissions in the country.

The published NDC for Solomon Islands has placed critical importance on transport as a mitigation priority to reduce its carbon footprints and improve the economic conditions of the country. As stated in the NDC, with appropriate international assistance to access financial and technical resources, Solomon Island can realize a 27% reduction in its GHG emissions by 2025 and 45% GHG emission reduction by 2030.

Furthermore, in an effort to reduce dependence on fossil fuel use in the country, Solomon Islands has secured funding from the Green Climate Fund and other development partners to construct and operate the 15MW Tina hydropower. The project will be able to supply 65% of Honiara's electricity demand by 2023. This is a major milestone on Solomon Islands' determination to reduce its GHG emissions as per their NDC target. The 15MW Tina hydropower will complement the low carbon transport development in the country by ensuring that the energy demand from the transport sector will not increase the burden on imported fossil fuel.

2. Problem statement

¹ <https://www.worlddata.info/oceania/solomon-islands/energy-consumption.php>

² <https://www.adb.org/sites/default/files/linked-documents/46014-002-ssa.pdf>

Founded on the national and sectoral context as detailed in the section above, please include a brief problem statement clarifying the main problems and barriers for climate change mitigation and/or adaptation in terms of climate technologies that the CTCN Response Plan will address and overcome. (maximum 1250 characters including spaces).

As with many Pacific Island Countries, low carbon transport in Solomon Islands is new and many of the policy makers have very limited knowledge and understanding on the technology like electric vehicles and its benefits. A lot more education and awareness are needed to increase the introduction of hybrid and electric transport system in the country.

Furthermore, the promotion of low carbon transport in Solomon Islands faced following challenges:

- Governance challenges –Lack of clear policy and legislation hinders the promotion of the low carbon transport in the Solomon Islands. This is due to lack of adequate technical information in the transport sector. Policy makers felt reluctant to make bold decisions without reliable data and evidence.
- Financial barriers –Due to its fragile economy and limited income generation initiatives, the country relies heavily on donor funded projects to help adapt and mitigate the effects of climate change. There is inadequate national budget allocated to make the shift towards low carbon transport developments.
- Technical and Institutional challenges – limited capacity and skilled personnel in country to conduct technical assessments and feasibility study on the future of low emission transport sector in Solomon Islands. The institutional arrangements need to be assessed on its effectiveness and efficiency in addressing transport sector issues in the Solomon Islands
- Lack of education and awareness - The majority of the people don't understand the climate change, environmental and economic benefits that derived from the use of low carbon transport systems. Improved education and awareness on low carbon transport will help people to better appreciate the benefits of the shift towards low carbon transport.

While there might be information available on the transportation system in Solomon Islands, the information is fragmented with unclear institutional frameworks in place. The existence of information asymmetry in the transportation institutional structure of Solomon Islands creates policy and regulatory challenges for low carbon transport developments.

CTCN TA is requested to conduct the feasibility study for low carbon transport in Solomon Islands.

The CTCN support is needed in two folds:

- Market analysis to recommend policy and implementation roadmap on low carbon transport through electric vehicle.
- Feasibility study on selected interventions and capacity building on low carbon transport.

Overall objective

The overall objective of the TA is to conduct market analysis to introduce and promote low carbon transport complemented with policy, implementation roadmap, feasibility study and capacity building on electric vehicles.

Anticipated groups of activities to be performed by the technical assistance

Under the TA, the following activities will be implemented:

- Assessment of the options available and barriers to the market adoption of electric mobility in Solomon Islands as an approach to low carbon land transport and draft the national policy on EV

(Electric Vehicles) for land transport.

- Under the scope of proposed policy, recommend on the implementation roadmap for deployment and upscaling of the EV and supporting sustainable infrastructure with an integrated approach to climate change mitigation and adaptation based on local context.
- Conduct detailed feasibility study on selected action plans to develop business case on procuring and deploying electric vehicles and sustainable supporting infrastructure.
- Facilitate capacity building and awareness of relevant stakeholders from government and EV value chain focusing on the gender gaps.

Anticipated products to be delivered by the technical assistance.

The anticipated deliverables from the TA would be the following:

- A policy document including the baseline assessment and barrier analysis to implement the policy, including the charging infrastructure required and battery management.
- Draft and final report on implementation roadmap and stakeholder consultation workshop
- Draft and final report on the feasibility study conducted.
- Draft GCF concept note
- Report on capacity gaps based on the assessment of the awareness of the stakeholders.
- Virtual sessions on capacity building and training with relevant materials
- Awareness raising factsheets, brief manuals and brochures

<p>Output 2: Assessment of the options available and barriers to the market adoption of electric mobility in Solomon Islands as an approach to low carbon land transport and draft the national policy on EV (Electric Vehicles) for land transport.</p> <p>The output is to achieve a draft policy document which should be concise, but also provide all relevant information to set the way forward to an implementation roadmap (Output 3) for achieving the endorsement of the stakeholders for low carbon land transport through electric vehicles in Solomon Islands.</p>												
<p>Activity 2.1: <i>Conduct the market analysis, collect data on formal and informal modes of land transport.</i></p> <p>This will include an infrastructure analysis and assessment of vehicle availability (type of vehicle and infrastructure type best suited to Solomon Islands) scale-up potential, barrier identification such as energy availability, financing gap analysis, reliability of the charging infrastructure. This will further include the collection of primary and secondary data to conduct background analysis of land transport sector in Solomon Islands focusing on public and private vehicles used in urban areas in the Islands. The data will be used to conduct GHG projection, accommodating the developmental plans for the land transport sector. An integrated climate approach to be adopted for data collection, also considering the potential interlinkages from climate change adaptation perspectives. An effort shall be made at the time of data collections to disaggregate the responses from the surveyors by gender, youth and vulnerable group and brief follow up analysis on the same to be conducted, under this output.</p>												
<p>Activity 2.2: <i>Map out potential stakeholders in EV value chain ranging from policy makers, financiers, automobile manufacturers, part suppliers and the consumers.</i></p> <p>While collecting data in Activity 2.1, effort should be made towards identifying the potential stakeholders using a value chain approach for land transport sector in Solomon Islands. Based on the data and information, a comprehensive list of stakeholders should be developed with detailed roles and responsibilities spanning over the complete technology life cycle of low carbon land transport such as Electric Vehicles. The list can be expanded by not limiting it within Solomon Islands, as potential players in the Pacific Region can also be included with appropriate justification on their support and engagement in Solomon Islands.</p>												
<p>Activity 2.3: <i>Draft the policy objectives, quantitative targets on the number of EVs with projected GHG emission avoidance, charging infrastructure and designated roles and responsibilities of the relevant authorities and relevant institutions.</i></p>												

<p>This will serve as a guiding policy document with clear, realistic, and measurable objectives and targets for low carbon transport through electric vehicles. This document will be prepared in consultation with relevant authorities and institutions.</p>									
<p>Activity 2.4: <i>Identify barriers from the policy implementation perspective and recommend on viable instruments to promote EV.</i></p> <p>Conduct the barrier analysis that are identified to impede the implementation of the policy objectives. Recommendations based on international experience to overcome the barriers to be made, if capacity gaps and barriers are found to be fed to Activity 5.2. It is imperative to assess the barriers using a value chain approach for the implementation of electric vehicles. The value chain approach will address the complex issues for island nations such as the energy requirements from the electric vehicles shall not add to the fossil fuels for electricity generation and there shall be environmentally sound management and disposal of electronic wastes like the batteries. Hence, following is to be carried out under the barrier analysis, as well.</p> <p>Activity 2.4.1 Analyze the total additional load on the grid due to introduction of EVs and barriers to its augmentation through the use of RE based systems.</p> <p>Activity 2.4.2 Estimate the life of the battery systems and projected generation of discarded batteries at the end of each year for a time span of 10 years. Assess the barriers to the environmental sound management and disposal of such wastes generated from EV value chain.</p>									
<p>Deliverable 2: i) <i>A policy document also including the baseline assessment and barrier analysis to implement the policy, including the charging infrastructure required and battery management.</i></p>			X						
<p>Output 3: Under the scope of proposed policy, recommend on the implementation roadmap for deployment and upscaling of the EV and supporting sustainable infrastructure with an integrated approach to climate change mitigation and adaptation based on local context</p> <p>A detailed implementation roadmap based on the international cases will be drafted to achieve the policy objectives proposed under output 2. Proposed action plans under the implementation roadmap will be supplemented with assessments on implementation time, required size of investment, potential financing source, link and refer back to- activity 2.4 on the potential barriers and solutions and activity 2.2 on the required institutional arrangements; and impacts in terms of no. of EVs to be deployed, charging infrastructure to be built,</p>									

<p>energy savings and GHG emission avoidance targeted at activities level. Recommendations will be made on the combination of potential business models, regulatory intervention and financial and fiscal incentives that will support the implementation roadmap.</p> <p>For example (for illustration purpose only), electrification of two wheelers may found to be the lowest hanging fruit to prioritize it as short-term action with grant support from GCF or other financing mechanisms followed by substantial targets on electrification of fleets of other vehicles and supporting charging infrastructure well integrated with RE based grid as the mid- and long- term actions. The implementation roadmap will be developed in consultation with the relevant authorities and final draft will be presented to the stakeholders to achieve their comment, feedbacks and endorsement.</p>												
<p>Activity 3.1: <i>Consolidate and review transport plans and policies in the Pacific countries and other countries having similar transport landscape as Solomon Islands to recommend/develop the action plans for EV implementation.</i> The EV implementation roadmap will be categorized under short-, mid- and long-term action plans.</p>												
<p>Activity 3.2: <i>Recommend suitable business models/ regulatory support and investment plans to implement the actions based on blended approach of integrating international experiences and local context gathered based on transport sector assessment focusing on EV.</i></p> <p>The recommended business models will also reflect on the requirement of strong cooperation between the key stakeholders in the power and transport sectors. Combined with digital innovations (e.g. internet of things) and the shift of vehicle ownership to shared modalities, e-mobility concepts open up opportunities for new business models, such as vehicle-to-grid (V2G) and grid-to-vehicle (G2V), in the long-term.</p>												
<p>Activity 3.3: <i>Review the institutional arrangements and capacity gaps for the for the identified players under 2.3, to implement the roadmap</i></p>												
<p>Activity 3.4: <i>Engage relevant stakeholders to consult with an aim to validate and revised the draft implementation roadmap for the EV through physical or virtual mode.</i></p> <p>Relevant research and academia community, identified in Solomon Islands or in Pacific Islands region to be engaged in consultation to gain RD&D perspectives on promoting the electric vehicles in Pacific Islands, as well.</p>												
<p>Deliverables 3:</p> <ul style="list-style-type: none"> i) Draft and final report on implementation roadmap ii) Stakeholder consultation workshop and synthesized report on the same 						X						

Activities and Outputs	Input: Human Resources	Input: Travel	Inputs: Meeting s/events	Input: Equipme nt/Materi al	Estimated Budget	
					Minimu m	Maximu m
Activity 2.1: <i>Conduct the market analysis and baseline analysis through collecting data on formal and informal modes of land transport</i>	13,350-15,860 <i>(TL-12, TE-15, LE-20, GE-1)</i>	15,000 <i>(1 international mission to Solomon Islands and DSA cost for 1 week for data collection³)</i>			28,350	30,860
Activity 2.2: <i>Map out potential stakeholders in EV value chain ranging from policy makers, financiers, automobile manufacturers, part suppliers and the consumers.</i>	7,600-9,240 <i>(TL-8, TE-10, LE-6, GE-0)</i>				7,600	9,240
Activity 2.3: <i>Draft the policy objectives, quantitative targets on the number of EVs, charging infrastructure and designated roles and responsibilities of the relevant authorities and relevant institutions</i>	7,350-8,960 <i>(TL-7, TE-10, LE-5, GE-1)</i>				7,350	8,960
Activity 2.4: <i>Identify barriers from the policy implementation perspective and suggest viable instruments to promote EV using a value chain approach with emphasis on grid augmentation with Renewable energy and EV waste management like discarded batteries.</i>	6,450-7,710 <i>(TL-7, TE-7, LE-8, GE-0)</i>				6,450	7,710
Output 3: Under the scope of proposed policy, recommend on the implementation roadmap for deployment and upscaling of the EV and supporting sustainable infrastructure with an integrated approach to climate change mitigation and adaptation based on local context	32,400-39,270	15,000	7,000	5,000	59,400	66,270

³ The budget is indicative, and the actual cost will be based on the country from where the experts will travel for international missions.

Activities and Outputs	Input: Human Resources	Input: Travel	Inputs: Meeting s/events	Input: Equipme nt/Materi al	Estimated Budget	
					Minimu m	Maximu m
Activity 3.1: <i>Consolidate and review transport plans and policies in the Pacific countries and other countries having similar transport landscape as Solomon Islands to recommend/develop the action plans for EV implementation. The EV implementation roadmap will be categorized under short-, mid- and long-term action plans.</i>	7,550-9,200 (TL-10, TE-08, LE-03, GE-1)				7,550	9,200
Activity 3.2: <i>Recommend suitable business models and investment plans to implement the actions based on blended approach of integrating international experiences and local context gathered based on transport sector assessment focusing on EV.</i>	13,050-16,050 (TL-15, TE-18, LE-5, GE-0)				13,050	16,050
Activity 3.3: <i>Review the institutional arrangements and capacity gaps for the for the identified players under 2.3, to implement the roadmap</i>	8,250-9,800 (TL-10, TE-7, LE-10, GE-1)				8,250	9,800
Activity 3.4: <i>Engage relevant stakeholders to consult with an aim to validate and revised the draft implementation roadmap for the EV through physical or virtual mode</i>	3,550-4,220 (TL-4, TE-3, LE-4, GE-1)	15,000 (1 mission to Solomon Islands and DSA cost for 1 week for stakeholder consultation ⁴)	7,000 (1 day consultation workshop up to 30 participants)	5,000 (Venue, catering and logistic support to local officials)	30,550	31,220

⁴ The budget is indicative, and the actual cost will be based on the country from where the experts will travel for international missions.

Activities and Outputs	Input: Human Resources	Input: Travel	Inputs: Meeting s/events	Input: Equipme nt/Materi al	Estimated Budget	
					Minimu m	Maximu m
Output 4: Conduct detailed feasibility study on selected action plans to develop business case on procuring and deploying electric vehicles and sustainable supporting infrastructure	27,850-34,050				27,850	34,050
Activity 4.1: <i>Conduct detailed technical and financial feasibility analysis of selected action plan(s) with scalable business model. The feasibility will be carried out for the EV as well as the supporting sustainable infrastructure (charging stations, climate proof bus stops etc.).</i>	<i>13,350-16,350 (TL-15, TE-18, LE-7, GE-0)</i>				13,350	16,350
Activity 4.2: <i>Develop input to the GCF concept note with technical specifications to support the tendering and procurement of the electric vehicles and charging infrastructure.</i>	<i>14,500-17,700 (TL-15, TE-20, LE-10, GE-0)</i>				14,500	17,700
Output 5: Conduct capacity building and awareness of relevant stakeholders from government and EV value chain focusing on the gender gaps	7,850-9,250				7,850	9,250
Activity 5.1: <i>Facilitate capacity building and training of the relevant Government staff on the various aspects of EVs including basics of EV technologies, supporting policies and approach to piloting/ financing EV projects like procurement.</i>	<i>2,250-2,660 (TL-2, TE-2, LE- 3, GE-1)</i>				2,250	2,660
Activity 5.2: <i>Conduct an assessment on the level of awareness and readiness among the relevant stakeholders to adopt EVs. One of the perspectives to be included is the gender gaps as the consumer of EVs.</i>	<i>2,300-2,690 (TL-3, TE-1, LE- 3, GE-1)</i>				2,300	2,690

Activities and Outputs	Input: Human Resources	Input: Travel	Inputs: Meetings/events	Input: Equipment/Material	Estimated Budget	
					Minimum	Maximum
Activity 5.3: <i>Meeting the needs arise from 5.1, develop brief factsheets on the basics of EV including three/ four wheelers, buses, trucks and charging infrastructures -as applicable for Solomon Islands and its impact will be developed for public awareness.</i>	1,850-2,190 (TL-3, TE-1, LE-2, GE-0)				1,850	2,190
Activity 5.4: <i>The experiences from business case will be archived in form of reference manual for the relevant stakeholders</i>	1,450-1,710 (TL-2, TE-1, LE-2, GE-0)				1,450	1,710
Total					147,750	169,810

There are travels proposed in Activity 2.1 and Activity 3.4 in the budget plan. The Response Plan is prepared when the world is facing the global pandemic of COVID-19. All the travels and face to face meetings will be planned and undertaken after a detailed assessment of the risks due to COVID 19 and following the related advisory by the national and local government from the country where the project is located and the country where the implementer is located. This must be assured through a letter of undertaking provided by the authority of the entity requesting for travel and meetings before it is conducted.

In the scenario of continued lockdown and travel restrictions, there are uncertainties of travelling by the international consultant. To have the minimal impact of this risk on the timeline and workplan, the situation has to be monitored closely and alternate approaches may be suggested in discussion with the Solomon Islands' Government. In case the alternate approaches are to be adopted, the budget will be revised accordingly with revised plan, and the reasonable additional activities maybe suggested with the leftover budget. The revised plan will be agreed by CTCN and NDE before being adopted for implementation.

5. Profile and experience of experts

Based on the required Human Resources identified in section 4 (Resources required and itemized budget) please provide a description of the required profile of all involved experts for the implementation of the CTCN Response Plan.

Experts required	Brief description of required profile
Team Leader/ Project manager (TL)	<p>The project manager shall have the following expertise and experience:</p> <ul style="list-style-type: none"> • Demonstrated experience of leading and managing a team of experts from different cultural backgrounds and fields of expertise. • Have at least 15 years of experience in managing and conducting research and surveys, stakeholder engagements and developing policy recommendation, sectoral roadmaps for energy, technical programmes and financial proposals. • Prior experience of working in the land transport and / or energy sector of Pacific Island Countries and understanding of greenhouse mitigation through energy efficiency will be an added advantage. • Experience of working collaboratively with governments, regional and international organizations. • Have proficiency in reading, writing and speaking English and must be able to communicate with stakeholders effectively and to deliver on outputs in a timely manner.
Transport and Energy expert (TE)	<p>The Transport and energy expert shall have the following expertise and experience:</p> <ul style="list-style-type: none"> • An expert in the land transport sector of SIDS (Small Islands Developing States), both in the infrastructure / technical and engineering aspects as well as policy aspects too • At least 10 years of experience working for the land transport sector of a SIDS. • Knowledge of both civil and mechanical engineering would be an advantage. • Experience of developing transport related policies and roadmaps. • Familiarity with e-mobility and renewable energy-based transport systems and technologies. • Years of experience in stakeholder consultations and developing funding proposals. • Developing national programmes in the land transport sector.
Local Expert	<p>The Local expert shall have the following expertise and experience:</p> <ul style="list-style-type: none"> • Bachelor’s Degree, or equivalent, in Social Science, Sustainable Development, Statistics or other related fields is required. • Relevant professional experience of data collection, conducting surveys and stakeholder engagement. • Experience in policy research, database management, socio-economic analysis will be an advantage. • Understanding of the local context, culture and diversity in Melanesia • Experience in energy and transport is desirable. • Excellent oral and written communication skills in English is essential
Gender Expert	<p>The Gender Expert shall have the following expertise and experience:</p> <ul style="list-style-type: none"> • Understanding and demonstrated ability to incorporate gender considerations in the removal of barriers to sustainable development in SIDS. • At least 10 years of field experience working with women, youths and rural communities. • Understanding of the culture and diversity in Melanesia.

- Have proficiency in reading, writing and speaking English and must be able to effectively communicate with stakeholders.

6. Intended contribution to impact over time

Please provide a brief description of the intended contribution to impact over time of the outcome and outputs provided by this technical assistance on resilience to climate change and/or carbon abatement. To the extent possible, please quantify the intended impact contribution, for example by indicated estimated number of people potentially impacted over time, GDP contribution of the focus sector, carbon emissions by the focus sector, etc. This intended contribution to impact is what will happen if the objective (as articulated in section 3) is met. Please ensure relevant complementarity with text in sections 7 to 12. (maximum 1250 characters including spaces)

Solomon Islands produced a total of 90 million kWh of energy and consumed about 83.7 million kWh during the year 2014. The total CO₂ emissions of Solomon Islands is 201,685 tonne⁵. The imported fossil fuels accounted for a major share of energy generation and consequent GHG emissions.

The TA on low carbon transport in Solomon Islands is expected to contribute to the National Development Strategy 2016 – 2035 particularly on sustainable Environment, contributing to climate change mitigation for all Solomon islanders.

The TA will led to the overall reduction of GHG emission by reducing carbon footprints from transport sector. As stated in the NDC, with appropriate international assistance to access financial and technical resources, Solomon Island can realize a 27% reduction in its GHG emissions by 2025 and 45% GHG emission reduction by 2030.

7. Relevance to NDCs and other national priorities

Please identify relevance and contribution from the technical assistance to the Nationally Intended Contributions (NDC) and other relevant national prioritized efforts (TNAs, TAPs, NAPs, NAMAs, etc.). (maximum 2500 characters including spaces)

Solomon Islands submitted its first NDC to the UNFCCC in 2016 (21/09/2016) after its ratification of the Paris Climate Change Agreement. The NDC has a target emission reduction of 12% below 2015 levels by 2025 and 30% below 2015 level compared to a BAU projection (pp. 7). However, with international assistance, the country can contribute to a further 27% reduction in GHG emission by 2025 and 45% emission reductions by 2030 compared to BAU projection (pp. 7).

The NDC report acknowledged that 61% of fossil fuel emissions comes from the Transport sector. Therefore, to realize the emission reduction targets in the SI NDC, an integral sector to consider and address is the transport sector. It will be through this TA that viable options for low carbon emission in the transport sector will be identified for further funding and actions.

Furthermore, the TA is also aligned with the Technology Needs Assessment, National Energy Policy, National Development Strategy and National Adaptation Plans.

8. Linkages to relevant parallel on-going activities:

Please identify relevant previous and ongoing public and private sector initiatives, projects or programmes that the CTCN assistance will specifically build on and contribute to. To the extent possible, please add practical and operational details on the linkages between existing activities and the CTCN assistance. (maximum 2500 characters including spaces)

As with many Pacific Island Countries, Low Carbon Transport in Solomon Islands is new and many of the policy makers have very limited knowledge and understanding on the technology and its benefits. A lot more education and awareness are needed to increase the introduction of hybrid and

⁵ <https://www.worlddata.info/oceania/solomon-islands/energy-consumption.php>

electric transport system in the country.

The Pacific Centre for Renewable Energy and Energy Efficiency has recently completed and published the ‘Regional Electric Mobility Policy and Programme for the Pacific Island Countries’. The document outlines policy and programme actions to support PICs with e-mobility and low carbon transport development in the PICs.

9. Anticipated follow up activities after this technical assistance is completed:

Please describe the expected future use of the outputs and deliveries produced by this technical assistance, after the CTCN implementation is completed, towards contributing to the anticipated impacts over time articulated in section 6. For example, what organizations or stakeholders will use the outputs of the technical assistance after it is completed, for what purpose, at what scale and scope the outputs and deliveries will be applied, when and what will be the next steps undertaken, etc. (maximum 2500 characters including spaces)

The Feasibility Study report generated from this TA will provide concrete evidence to the Solomon Islands’ Government for immediate decision and action on energy efficiency particularly in the transport sector. The recommendations from the study report will assist the Government to appraise its current energy and transport policies and regulations to be inclusive of energy efficiency and also take immediate necessary steps to implementing the energy efficiency measures in its land transport sector.

A deliverable from this TA will be the development of the funding proposal targeted at the Green Climate Fund (GCF) and other funding sources. Once funding is approved, the implementation of the barrier removal activities identified in the study can be implemented. This would create a transformation change in country’s land transport sector, supporting its ambition and the global effort on reducing GHG emissions and achieving the Paris Agreement.

10. Gender and co-benefits:

<p>Imbedded in design of the activities:</p>	<p><i>A gender mainstreaming analysis is mandatory to include for all technical assistances. A gender expert will be assigned to carry out an assessment and evaluation regarding gender mainstreaming during the implementation of the TA.</i></p> <p><i>In addition, please describe all support to gender aspects, women’s equality and other co-benefits embedded into the Response Plan (please include a reference to the actual activities and outputs as described in section 3).</i></p> <p>The TA is designed with an imbedded intention to deal with the gender issues in the following ways as also reflecting in the request document:</p> <ul style="list-style-type: none"> • The capacity building and training workshops planned under the TA will address the capacity gaps from gender perspectives.
<p>Gender and co-benefits intended as result of the activities:</p>	<p><i>Please describe all gender aspects, women’s equality and other co-benefits expected as a result of the CTCN technical assistance.</i></p> <ul style="list-style-type: none"> • Likely generation of livelihoods as the positive developments from this TA will generate opportunities in vehicle maintenance and imports of more efficient vehicles, bicycles and hybrid and electric vehicles.

	<ul style="list-style-type: none"> • The TA will present opportunities for training and capacity building targeted at women on energy efficiency in the transport sector. • The TA will generate improved health not only from a cleaner air from more efficient vehicles but also from the promotion of walking and cycling as efficient means of transport.
--	---

11. Main in-country stakeholders in implementation of the technical assistance activities:

Using the table below, please list and describe the role of in-country stakeholders, participants and beneficiaries who will be involved in or directly consulted during implementation of the assistance.

In country stakeholder	Role in implementation of the technical assistance
National Designated Entity Department of Climate Change	Overall oversight of the TA
Request Applicant Department of Energy (DoE)	Day to day management and coordination of the TA
Ministry of Infrastructure Development	Institutional and policy Support on low transport, information sharing and local coordination
Pacific Community’s (SPC) Pacific Centre for Renewable Energy and Energy Efficiency (PCREEE)	Technical Advice and support to the NDE and Request Applicant. Lead in coordination and conduct of the national consultations, workshops and the arrangements of technical visits
Solomon Islands Chamber of Commerce and Industry (SICCCI)	Coordination with the business vehicle owners and other private importer of vehicles
Ministry of Provincial Government and Institutional Strengthening	Coordination with Provincial and Community level leaders
Honiara City Council	Coordination with public transport providers in Honiara

12. SDG Contributions:

Instructions: Please complete the grey section below for **a maximum of three SDGs** that will be advanced through this TA. A complete list of SDGs and their targets is available here:

<https://sustainabledevelopment.un.org/partnership/register/>.

Goal	Sustainable Development Goal	Direct contribution from CTCN TA (1 sentence for top 1-3 SDGs)
1	End poverty in all its forms everywhere	
2	End hunger, achieve food security and improved nutrition, and promote sustainable agriculture	
3	Ensure healthy lives and promote well-being for all at all ages	The TA will introduce electric vehicles that will reduce air pollution and hence will promote healthy lives and promote well-being for all at all ages
4	Ensure inclusive and equitable quality education and promote life-long learning opportunities for all	
5	Achieve gender equality and empower all women and girls	Promote equity in gender as the consumer of EVs.
6	Ensure availability and sustainable management of water and sanitation for all	
7	Ensure access to affordable, reliable, sustainable, and modern energy for all (consider adding targets for 7)	
	7.1 - By 2030, ensure universal access to affordable, reliable and modern energy services	
	7.2 - By 2030, increase substantially the share of renewable energy in the global energy mix	
	7.3 - By 2030, double the global rate of improvement in energy efficiency	Increase energy efficiency in land transport

	7.a - By 2030, enhance international cooperation to facilitate access to clean energy research and technology, including renewable energy, energy efficiency and advanced and cleaner fossil-fuel technology, and promote investment in energy infrastructure and clean energy technology	
	7.b - By 2030, expand infrastructure and upgrade technology for supplying modern and sustainable energy services for all in developing countries, in particular least developed countries, small island developing States, and land-locked developing countries, in accordance with their respective programmes of support	Promote integration of RE in the grid to support the energy requirements of EVs
8	Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all	
9	Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation	
10	Reduce inequality within and among countries	
11	Make cities and human settlements inclusive, safe, resilient and sustainable	
12	Ensure sustainable consumption and production patterns	
13	Take urgent action to combat climate change and its impacts	Reduce GHG in transport sector
	13.1 - Strengthen resilience and adaptive capacity to climate-related hazards and natural disasters in all countries	
	13.2 - Integrate climate change measures into national policies, strategies and planning	
	13.3 - Improve education, awareness-raising and human and institutional capacity on climate change mitigation, adaptation, impact reduction and early warning	
	13.a - Implement the commitment undertaken by developed-country parties to the United Nations Framework Convention on Climate Change to a goal of mobilizing jointly \$100 billion annually by 2020 from all sources to address the needs of developing countries in the context of meaningful mitigation actions and transparency on implementation and fully operationalize the Green Climate Fund through its capitalization as soon as possible	
	13.b - Promote mechanisms for raising capacity for effective climate change-related planning and management in least developed countries and small island developing States, including focusing on women, youth and local and marginalized communities	
14	Conserve and sustainably use the oceans, seas and marine resources for sustainable development	
15	Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss	
16	Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels	
17	Strengthen the means of implementation and revitalize the global partnership for sustainable development	

13. Classification of technical assistance:

Please indicate primary type of technical assistance. Optional: If desired, indicate secondary type of technical assistance.

<i>Please tick off the relevant boxes below</i>	<i>Primary</i>	<i>Secondary</i>
<input type="checkbox"/> 1. Decision-making tools and/or information provision	<input type="checkbox"/>	<input type="checkbox"/>
<input checked="" type="checkbox"/> 2. Sectoral roadmaps and strategies	×	<input type="checkbox"/>
<input checked="" type="checkbox"/> 3. Recommendations for law, policy and regulations	×	<input type="checkbox"/>
<input type="checkbox"/> 4. Financing facilitation	<input type="checkbox"/>	×
<input type="checkbox"/> 5. Private sector engagement and market creation	<input type="checkbox"/>	×
<input type="checkbox"/> 6. Research and development of technologies	<input type="checkbox"/>	<input type="checkbox"/>
<input checked="" type="checkbox"/> 7. Feasibility of technology options	×	<input type="checkbox"/>
<input type="checkbox"/> 8. Piloting and deployment of technologies in local conditions	<input type="checkbox"/>	<input type="checkbox"/>
<input type="checkbox"/> 9. Technology identification and prioritisation	<input type="checkbox"/>	<input type="checkbox"/>

Please note that all CTCN technical assistance contributes to strengthening the capacity of in country actors.

14. Monitoring and Evaluation process

Upon contracting of the implementing partners to implement this Response Plan, the lead implementer will produce a monitoring and evaluation plan for the technical assistance. The monitoring and evaluation plan must include specific, measurable, achievable, relevant, and time-bound indicators that will be used to monitor and evaluate the timeliness and appropriateness of the implementation. The CTCN Technology Manager responsible for the technical assistance will monitor the timeliness and appropriateness of the Response Plan implementation. Upon completion of all activities and outputs, evaluation forms will be completed by the (i) NDE about overall satisfaction level with the technical assistance service provided; (ii) the Lead Implementer about the knowledge and learning gained through delivery of technical assistance; and (iii) the CTCN Director about timeliness and appropriateness of the delivery of the activities and outputs.

Annex 1: Guidance note for designing a Response Plan (to be deleted when submitting the Response Plan)

1. Objective of the Response Plan

The Response Plan is developed by CTCN specialists in response to a country request for technical assistance. It constitutes the Terms of Reference of the CTCN technical assistance that will be provided to the country and it provides the formulation of and subsequent basis for the monitoring and evaluation of the Response Plan implementation, as well as its expected outcomes and anticipated impacts.

2. Results chain and Logical Framework Approach to be defined in the CTCN Response Plan

The result chain is the causal sequence that stipulates the necessary flow of actions and processes to achieve desired objectives and results – beginning with inputs, moving through activities and outputs, and culminating in individual outcomes. The outcome will contribute to the desired impact in the society. The Logical Framework Approach is an analytical process used to support objectives-oriented project planning and management. It provides a set of pre-defined concepts which are used as part of an iterative process to aid structured and systematic analysis and management of the CTCN technical assistance.

3. Role of the Response Planning Design Team

The Response Planning Design Team is selected by the Climate Technology Centre (CTC). The composition of the team depends on each particular request but may include the National Designated Entity (NDE), the request Proponent, Climate Technology Manager of the CTCN, experts from the CTCN Consortium, UNIDO and UNEP experts from regional offices and other experts as needed.

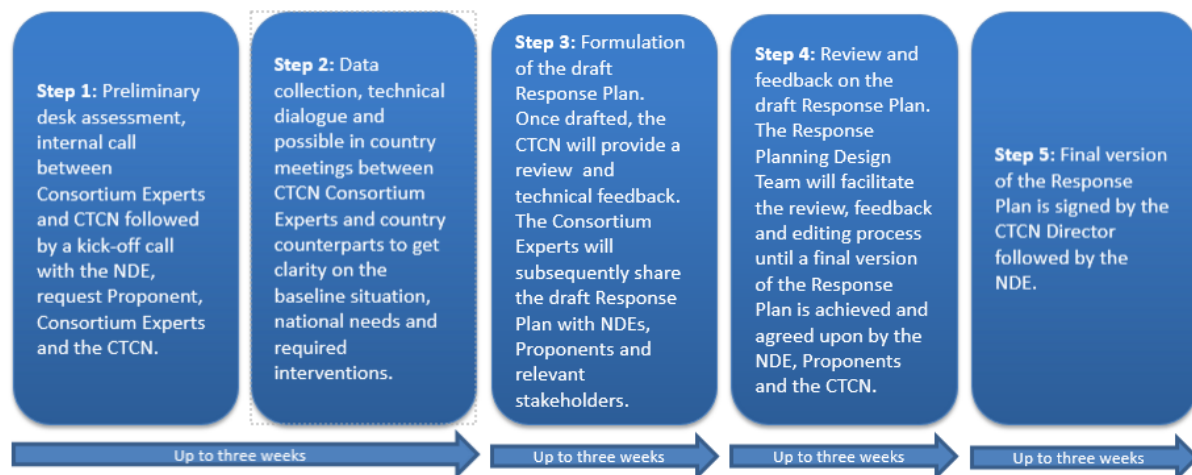

The role of CTCN Consortium experts is to lead the design of the Response Plan. The NDE will provide overall guidance on national context and priorities whereas the request Proponent will provide more detailed information on the sector, barriers and requested assistance. The Climate Technology Manager of the CTCN will provide quality assurance of timeliness and appropriateness of the Response Plan.

The Response Planning Design Team will draft all sections of the Response Plan template building on the information contained in the CTCN Request, based on expertise on the given topic and potentially further data collection, as required. This will be done by the CTCN Consortium Experts in consultation with the NDE, request Proponent and relevant stakeholders. The Response Plan has to be agreed to and approved by the NDE and the CTCN Director. This Response Plan will serve as the basis to identify, select and engage an expert institution from the Climate Technology Network or Consortium to lead the implementation of the CTCN Response Plan in the requesting country.

To the extent possible, staff from UNEP and UNIDO Regional, Sub-Regional and/or National Offices should be involve in all stages of formulation of the Response Plan to maximize synergies and avoid overlap with ongoing initiatives, as well as ensure relevance to regional and national context.

4. Process for designing the Response Plan

The Response Planning process should be completed over a period of up to 60 working days (12 weeks). Indicative steps and related timelines are laid out below:

5. Design Considerations

In order to maximize the impact of the technical assistance provided by the CTCN and provide an effective M&E process, the Response Plan should integrate as much as possible the considerations below:

Climate Technology focus: The Response Plan should have a clear focus on climate technologies, and identify activities that enable the identification, development, deployment or diffusion of one or several specific technologies (including equipment, techniques, knowledge and skills).

Barrier removal / Problem solving: The activities should contribute to address the specific problem statement identified in the Request. The barriers identified should be those hampering the identification, development, deployment or diffusion of one or several climate technologies or climate actions. Therefore, it may be necessary to limit the CTCN Response Plan to a set of activities for technical assistance commonly agreed with the NDE (and Proponent when needed) compared to the original request submitted. The CTCN will liaise with NDEs and Proponent in case the scope of the technical assistance deviates from the original request.

Use of the CTCN assistance by stakeholders: The Response Plan should identify clearly how the products of the CTCN assistance will be used in the short term once support is delivered, by who and when, to ensure it will lead to specific impacts in the country. The activities should engage the stakeholders that will use the concrete results of the assistance to deploy the technologies, including from the private sector, the public sector, research institutions, etc.

Within the scope of CTCN resources: The cost of the technical assistance provided by the CTCN cannot exceed USD 250,000 per Response Plan. Therefore, it may be necessary to prioritize activities and limit the CTCN Response Plan to a set of priority activities commonly agreed with the Proponent and the NDE to remain under this value. Under section 4 of the Response Plan template, an indicative activity based budget should be presented. The proposed budget is indicative and should present an estimated costing range per activity, output as well as a total costing range for the delivery of the Response Plan. Once the Response Plan is finalised and published for tendering, interested parties will provide competitive offer against the indicative budget.

CTCN activities and outputs should be linkable to monitoring and evaluation indicators: All proposed activities and outputs must be linkable to monitoring and evaluation indicators that are specific, measurable, achievable, relevant, and time-bound. The monitoring and evaluation process and corresponding indicators will be developed by the Lead Implementer as part of the work plan and will allow the CTCN technology Manager to monitor the timeliness and appropriateness of the implementation.

Synergies with existing efforts: The Response Plan should focus on activities that are not already being fully supported or that are in the process of being fully supported by another national, regional or international organization. Synergies and complementarity also require that the CTCN assistance is not duplicating past activities. It is possible in the Response Plan to indicate co-financing from the government, the Proponent or another stakeholder, that will maximize the effectiveness of the CTCN assistance.

Gender mainstreaming: The CTCN mission is to build or strengthen developing countries' capacities to identify technology needs, to facilitate the preparation and implementation of technology projects and strategies taking into account gender considerations. The Response Plan must therefore describe how gender considerations will be included and monitored within the proposed activities, and any gender co-benefits that will be gained as a result of implementing the CTCN technical assistance.
